HARDI MERCURY/ARROW

Service and Maintenance Logbook

679091-GB-10/2004

Foreword

This booklet is used for keeping record of the regular, preventive service and maintenance jobs carried out on your mistblower.

In many situations the machine is operated by several different operators. If all regular maintenance jobs are written down in this logbook it will prevent misunderstandings amongst the different operators and thereby ensure that all regular maintenance jobs are carried out.

The maintenance schedule is listed in this book - for full and detailed explanation of the individual jobs please see the operator's instruction book.

Working Conditions

As the working conditions will be different from one machine to another, the optimal maintenance intervals may be different to those recommended in the instruction book - e.g. oil change intervals.

If the machine is used intensively (more than 1000 hours pr. year) the regular maintenance intervals can be followed and noted in the chapter "Regular Service Log".

If the machine, however, is used less than 250 hours a year, it is still recommended to change gearbox oil at least once a year. These oil changes will not follow the regular maintenance scheme. To keep record, note the oil/filter changes in the chapter "Fluids and filters service log" instead.

User information

Page 3 in this book is filled out with practical information about the machine and owner/user. Always keep this book in the cab for information to your dealer's service personnel.
