HARDI Winterizing Solution Change

HARDI has decided to change the winterizing solution we use to protect our sprayers from the factory.

Additional information

- This change to take effect September 2020
- We have switched to a product designed specifically for use with crop sprayers
- This product is a very stable and nontoxic Propylene Glycol mixture with a -75 Fahrenheit burst rating
- The new antifreeze will have a red dye mix into it
- HARDI still does not recommend using antifreeze with an Ethanol base or a Propylene/Ethanol blend due to its drying properties which adversely affect the o-rings, diaphragms, and hoses throughout the plumbing system.

Machines affected:

All machines fluid tested by HARDI.

- N-Series
- Ranger
- Navigator
- Commander
- Presidio
- Saritor
- Alpha
- Rubicon

Reference documents:

Each specific sprayer operator's manual describes the winterizing process in detail. The recommendations in our manuals remains the same except for the recommended type of fluid.
