

Quality Technician

About the job

You will join the Quality Management Team and report directly to the Quality Manager. You will ensure that the basis for the future quality audits is present by making sure that any deviations are addressed and corrected. You will create a bridge between the product, engineering, market, sales, and the customer, communicate, and involve stakeholders from various functions, organizational levels, and countries in your daily work to secure the quality of products.

Your responsibilities

- Quality assurance tasks within this position – including the following:
- Ensure that items are documented so that quality control is possible – including the establishment quality control goals
- Participation in the preparation and updating of quality documentation – including development of standards, guidelines, and measurement reports
- Ensure initiation / development of auxiliary tools that can promote quality work – including development of test tools, as well as documentation covering design and use
- Assist Strategic Procurement, R&D, PTA, and suppliers in quality-related issues
- Participate in product controls, analysis of deviations, initiate and follow up on corrective actions – this in collaboration with internal and external partners
- Participate in vendor audits
- Corrective actions using means and methods within the agreed framework
- Project management related to the above tasks may occur
- Cross-organizational coordination responsibility may also occur

Your profile

- Experience from a similar position as Quality Technician is requested with a preferably educationally background as Mechanical Engineer, Technical Draftsman, Measuring Technician or similar background
- Experienced with welding, theoretical and operational
- Auditor training (desirable)
- Experience from a production environment in a related industry
- Experience with measurement techniques and methods
- Excellent knowledge of MS Office
- Excellent knowledge of 2D/3D CAD drawings
- Experience with the preparation of technical documentation and instructions
- Excellent communications skills in English both verbally and in writing
- Thorough (focus on detail and finish)
- Analytical
- Good collaboration skills
- Persistent
- Structured
